Bariatric wings set for self-loading stretchers complete with mattresses and belts with reel

FEATURES

The bariatric wings are a practical accessory that allows you to convert the self-loading stretcher into a practical bariatric recovery tool. Thanks to the small footprint (and a weight of only 14 kg) they can be easily transported by ambulance to be used when needed. Their use allows to face in safety, and in the most adequate way possible, every recovery scenario in the presence of bariatric patients. The kit includes two wings that extend the support surface of the stretcher by over 40 cm; assembly and disassembly on the self-loading stretcher are extremely simple and intuitive and do not require the use of tools. If mounted on our MBS01 they allow an effective load capacity of 335 kg. The bariatric wings are equipped with mattresses (art. [12170](#) and art. [12172](#)) and belts with reel. They can be purchased in kits including both the right and the left (art. 12084) or separately (art. 12086 Right bariatric wing and 12088 left bariatric wing).

IMPORTANT: For Mercury self loading stretcher use art. [12200](#).

Dimensions:
1365x205x85 mm (a wing)
