

## 914 Winner

---

Self loading stretcher with trendelenburg and fowler

---

### FEATURES

This article has been designed to offer a practical and safe instrument to the operator in case of emergency. The stretcher, built with anodized aluminium, is strong and handy thanks to its four wheels diam. 150, two fixed with brakes and two rotating. Important feature of this article is the loading height regulation system. The automatic loading stretcher "WINNER" in fact is supplied with two sturdy perforated plates that allow to change the little front wheels height in order to load the stretcher on ambulances of various model and with different inside fittings.

This stretcher has the possibility of having Trendelenburg and Fowler positions becoming this way a more complete and functional support for every emergency situation. Back rest and lying part made with thermoplastic material reinforced to allow cardiac massage.

Easy to clean and to disinfect. Adjustable back rest 0° - 80°, moved by a gas piston that allow to fix the back rest safely in any position. Trendelenburg and Fowler positions moved by gas pistons. Side protections completely overturnable. Blocking device for folded legs with a system that avoid the compression of the blocking bar. Safety lever for the legs positioned near the unlocking device allowing thus the release operation for the loading, keeping the hands on the stretcher. Vertical legs protected by nylon wedges. Self centring device mounted on rotating wheels.

This system automatically blocks the back wheels in the central position during the loading of the stretcher on the ambulance avoiding to turn the wheels manually.
